

Drupal Foundations is DrupalEasy's base training offering available to organizations and teams focused on robust foundational knowledge of the Drupal content management system.

Designed to provide the essential underpinnings and best practices of Drupal development, the curriculum caters to those new to Drupal and developers seeking to revitalize their foundational skills and knowledge. Subject matter can be pared down or extended to target specific needs of participants and provide hands-on experience with the particular tools and workflows common to Drupal project development.

The full course curriculum covers the basic building blocks of a Drupal site, how to extend Drupal with contributed and custom modules, how to theme Drupal, common development workflows, and how to interact with the community for sharing, support and networking. It is fully customizable in both content and schedule to ensure training will best address organization-specific learning goals.

Drupal Foundations includes live, online instruction; rich learning resources; community engagement; and independent practical activities to help participants become versed in the proficiencies needed to be successful in Drupal web development projects.

Resources

- 80 hours curriculum
- Comprehensive learning tools & screencasts for every lesson
- Adaptable scheduling
- Participant completion certificates
