Professional Module Development — DrupalEasy

Professional Module Development is DrupalEasy's flagship long-form module development course focused on modern Drupal development with a focus on code quality, automated testing, and sustainable development practices. Two versions of the course are available, including a comprehensive program and a lite format, to ensure participants have access to the level of training that best meets their needs to build skills and confidence.

The *Full* version consists of 90-hours of comprehensive professional development covering modern Drupal module techniques and skills, setting up a development environment, running automated tests, and using modern code quality tools.

The *Lite* version includes a 60-hour sub-set of the full course, covering select areas of the curriculum for those who don't require the full menu of topics. The lite format focuses on the core module development aspects of the class, skipping topics such as developer tools, events, custom Drush commands, and caching.

Resources

- **Access to DrupalEasy Learning Community through weekly office hours (2 hours/week)**
- **Comprehensive learning tools & screencasts for every lesson**
- ***Full* version includes 300+ pages of learning text and resources presented in five sections**
- ***Lite* version provides almost 200 pages of learning text and resources divided in three sections**
- **Classes & office hours presented with Zoom**
- **Dedicated Slack channel**
